EXP– 2

SETTING UP A ZOHO CREATOR ACCOUNT AND EXPLORING THE PLATFORM ARCHITECTURE AND INTERFACE

AIM

To create and configure a Zoho Creator account and explore its platform architecture, application development environment, and user interface.

OBJECTIVES

- To create a Zoho Creator account.
- To understand the Zoho Creator development environment.
- To explore forms, reports, pages, workflows, and applications.
- To understand the basic architecture of a low-code platform.

SOFTWARE / REQUIREMENTS

- Computer or laptop
- Internet connection
- Web browser
- Zoho Creator account

INTRODUCTION

Zoho Creator is a low-code application development platform that allows users to build business applications using visual development tools. It provides features for creating forms, storing data, generating reports, designing pages, and automating business workflows.

The platform reduces the amount of manual programming required and allows applications to be developed using visual components.

PROCEDURE

Step 1: Create an Account

1. Open a web browser.
2. Visit the Zoho Creator website.
3. Select the sign-up or free-trial option.

4. Create an account using the required details.
5. Complete the account verification process if required.
6. Log in to Zoho Creator.

Step 2: Explore the Dashboard

After logging in, the Zoho Creator dashboard provides access to applications and development options.

The dashboard can be used to:

- Create applications.
- Open existing applications.
- Manage applications.
- Explore templates.
- Access development tools.

Step 3: Create an Application

1. Select the option to create a new application.
2. Choose a blank application or suitable template.
3. Provide an application name.
4. Open the application builder.

Step 4: Explore Forms

Forms are used to collect and store information.

Examples:

- Customer Form
- Employee Form
- Product Form
- Student Form

Different field types such as text, number, date, email, dropdown, and lookup fields can be added to a form.

Step 5: Explore Reports

Reports are used to display and analyze the data collected through forms.

Examples include:

- List reports
- Summary reports
- Charts
- Dashboards

Step 6: Explore Pages

Pages can be used to create customized application interfaces and dashboards by combining different components.

Step 7: Explore Workflows

Workflows allow actions to be automated based on specific events or conditions.

For example:

New Order Created

↓

Check Order Details

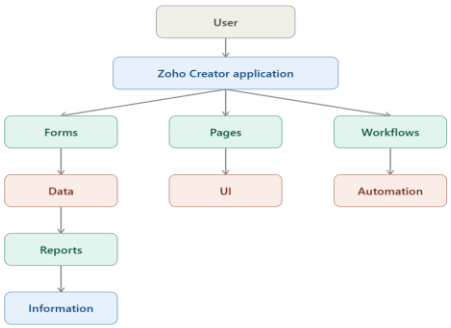

↓

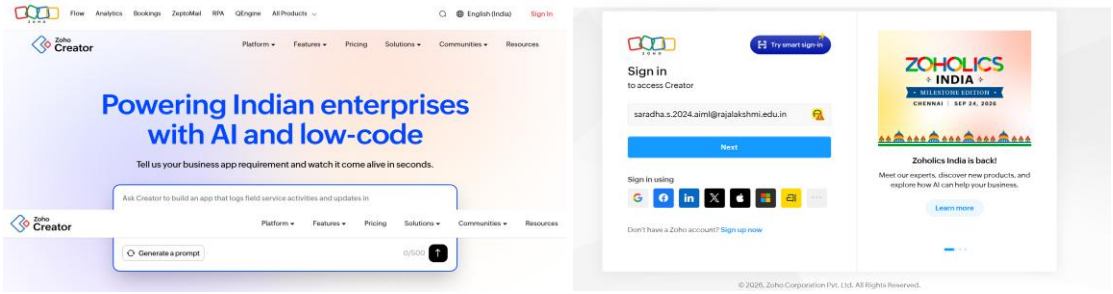

Update Order Status

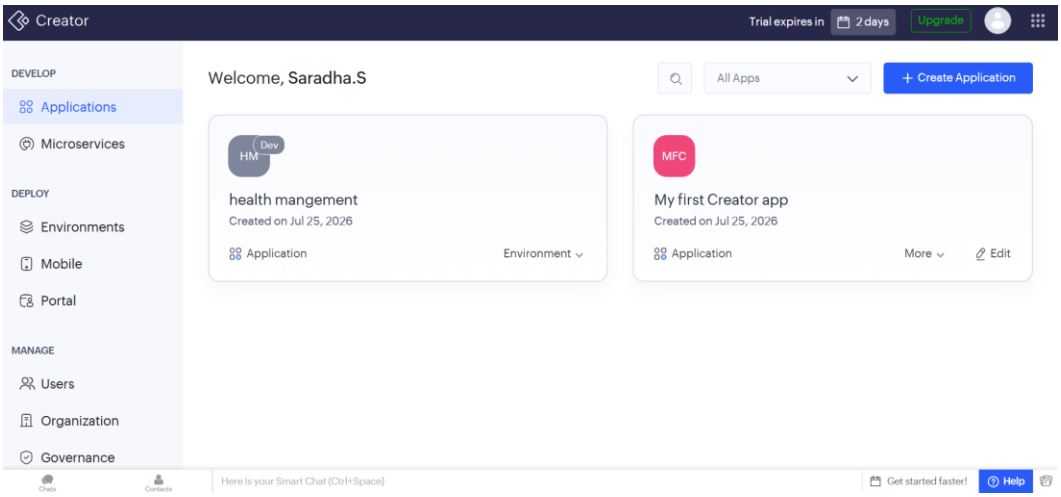

↓

Send Notification

BASIC ZOHO CREATOR ARCHITECTURE:

MAIN COMPONENTS

Component	Purpose
Application	Container for the complete business solution
Forms	Collect and store information
Reports	Display and analyze stored data
Pages	Create customized interfaces
Workflows	Automate business processes
Fields	Store individual data values
Dashboards	Provide visual summaries

OBSERVATION

The Zoho Creator platform provides a visual environment for developing applications. Forms can be used for data collection, reports can be used for viewing information, pages can provide customized interfaces, and workflows can automate business operations.

RESULT

A Zoho Creator account was successfully created and the major components of the platform, including applications, forms, reports, pages, and workflows, were explored successfully.
