EXPERIMENT 6 – WORKFLOW AUTOMATION USING DELUGE

Aim

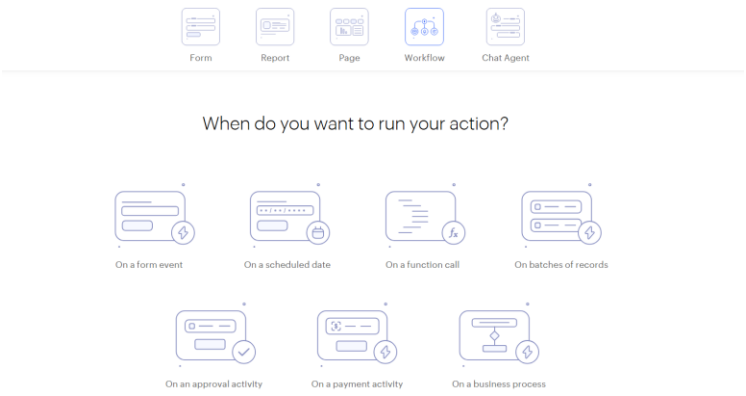

To create and test a workflow in Zoho Creator that automatically sends email notifications when a loan application is submitted.

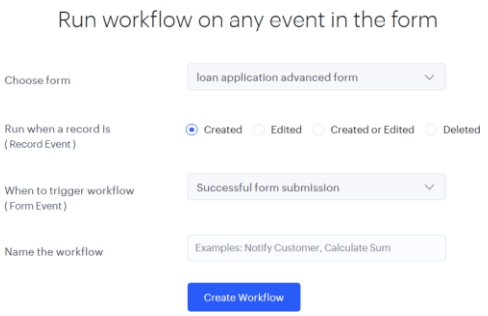

Objectives

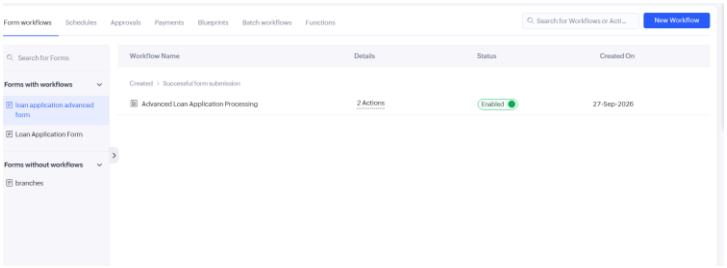

1. To create a workflow for the loan application form.
2. To configure email notification actions.
3. To automate notifications when a new record is created.
4. To test the workflow by submitting a form and verifying the received email.

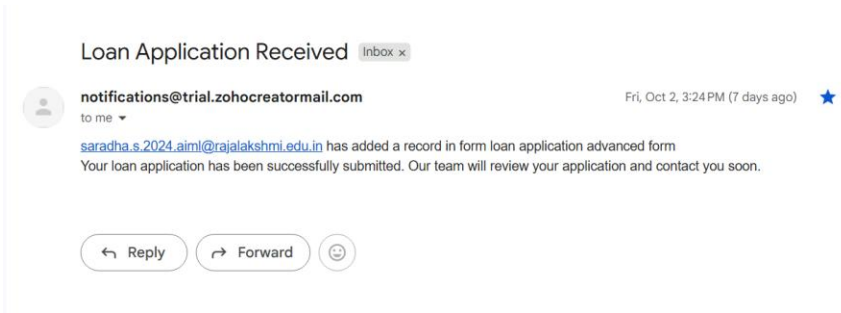

Procedure

1. Open the Loan Application app in Zoho Creator.
2. Navigate to Workflow and create a workflow for the advanced loan application form.
3. Select the Created event as the workflow trigger.
4. Configure the email notification actions with the recipient, subject, and message.
5. Save and enable the workflow.
6. Submit a test application and verify that the email notification is received.

Result

Thus, the workflow was created and tested successfully in Zoho Creator. Email notifications were received after submitting the loan application form.
